Professional Summary

Cybersecurity Analyst with hands-on experience in Security Operations, vulnerability assessment, digital forensics. Skilled in monitoring network traffic, detecting malicious activity, and investigating security incidents using industry tools such as Nmap, Nessus, Wireshark, and Metasploit. Experienced in identifying OWASP Top 10 vulnerabilities and automating security workflows using Python. Passionate about protecting enterprise systems, strengthening security posture, and supporting SOC operations through proactive threat detection and incident response.

Technical Skills

Security Operations: SIEM Monitoring, Log Analysis, Incident Response, Network Security

Offensive Security: Vulnerability Assessment, Penetration Testing, OWASP Top 10, SQL Injection, XSS

Digital Forensics: Autopsy, Sleuth Kit, FTK Imager, Disk Imaging (E01), Evidence Handling

Threat Intelligence: VirusTotal API, Malicious URL Analysis, Phishing Detection, IOC Analysis

Security Tools: Nmap, Nessus, Wireshark, Burp Suite, Metasploit, OpenVAS, Maltego, Bettercap, Ettercap

Programming: Python, Bash, JavaScript, SQL

Operating Systems: Kali Linux, Ubuntu, Windows

Experience

Cybersecurity Analyst

2025

Project-Based Experience — Security Labs and Independent Research

- Conducted vulnerability assessments and penetration testing on web applications and network environments using Nmap, Nessus, and Metasploit.
- Monitored and analyzed network traffic using Wireshark to detect suspicious activity, potential data exfiltration, and malicious connections.
- Investigated phishing campaigns and malicious infrastructure using VirusTotal API, IP metadata analysis, and URL redirection tracing.
- Developed Python automation scripts for phishing detection, threat intelligence enrichment, and automated security reporting.
- Performed digital forensic investigations on E01 disk images using Autopsy and Sleuth Kit to recover deleted files and reconstruct activity timelines.
- Assisted in incident response activities including log analysis, artifact correlation, evidence collection, and security event documentation.

Projects

Phishing Detection and Threat Intelligence Tool:

- Developed a Python-based phishing detection system capable of identifying malicious URLs and ngrok-based phishing frameworks.
- Integrated VirusTotal API for automated threat intelligence enrichment and reputation scoring.
- Implemented IP metadata extraction and HTTP redirection chain analysis to support threat investigations.
- Generated automated PDF and CSV security reports for SOC escalation.

Digital Forensics Investigation (DFIR):

- Performed forensic analysis on E01 disk images using Autopsy and Sleuth kit.
- Recovered deleted files and reconstructed user activity timelines.
- Documented forensic findings and produced structured investigation reports.

Password Security and Hash Cracking Analysis Tool:

- Developed a Python-based password analysis tool to evaluate credential strength using MD5 and SHA-512 hashing.
- Implemented brute-force and dictionary-based attack simulations using John the Ripper.
- Added real-time progress tracking and estimated cracking time metrics.

Education

B.Tech in Computer Science and Engineering (Cyber Security) St. Mary’s Group of Institutions, Guntur.	2021 – 2025
